

Case Study 2:

Internet accessible file storage and retrieval system (similar to commercially available products such as www.xdrive.com) with additional functionality to enable real-time custom website creation for independent financial advisors as well as their client-base through a well defined modular security framework.

Core features:

- Internet accessible file storage and retrieval system
- Modular roles based security for authentication and authorization
- Enhanced Content management features such as:
 - User Account Handling
 - Document Management
 - Permissions and Access Control
 - Version Control
 - Workspace & File Management
 - Real time access to the most latest content

Application was developed using Windows SharePoint Services(WSS 3.0), ASP.NET, C#, SQL SERVER 2005 and AJAX.
