

Panasonic Automotive System of America

iLink did a complete analysis of Panasonic environment and proposed an AD consolidation between the AD forests in Mexico and US. iLink completed the AD consolidation and machine migration into the new domain. Subsequently iLink cleaned up the complete AD with 2500+ objects.

Panasonic wanted to migrate to Office 365 with minimal business impact. iLink implemented a Hybrid Deployment model for PASA migration thereby performing batch based migration of 2400+ mailboxes and about 10TB of mail data with minimal business impact. Additionally iLink implemented ADFS based Single Sign On solution for the new Office 365 environment.

Benefits:

- Supported high business critical application (Exchange) migration with minimal business impact.
- Rehydrated the attachments into the mailbox before migration so as to ensure zero data loss due to migration
- Helped bring two AD forests into one consolidated AD thereby easing the operation management of AD
- Mailbox migration of 2400+ mailboxes. (~10 TB of data)
- Setup SSO experience for PASA employees enabling better user experience
- Enabled Automatic Profile Re-configuration thereby proactively reducing tickets in post migration phase.

Technology:

- Office 365
- Active Directory, ADMT
- Exchange
- ADFS, Edge Transport Server, Dir Sync, Active Sync, MDM etc.
