

Finning International Inc., headquartered in Vancouver, British Columbia, Canada, is the world's largest distributor of Caterpillar products and support services [www.finning.ca](http://www.finning.ca)

**Industry Vertical:** Business Services

**Technologies:**

**Key Buying Factor:**

- Excellent experience with SharePoint 2013 and SP Online
- iLink's Intranet framework
- Quick turnaround time
- Cost

## Business need:

Finning was looking to build a leader portal (to be used across all Finning regions) to provide the capability for leaders and employees at Finning to do self-directed learning online. They wanted to implement the following features

- Providing the ability for HR to administer tailored training plans for leaders based on the leaders' levels and other simple pre-defined rules
- Enabling appropriate authentication and authorization mechanisms so leaders can sign in and see their own confidential information and customized training plans
- Providing the ability for leaders to track the progress of their training plan
- Providing the ability for leaders to notify their managers through the portal during and upon completion of their training program
- Providing the ability for HR team members to track leaders' progress on the training plan
- Ability to support both English and Spanish users

## iLink's Solution:

iLink's solution involved building a state of the art learning portal using SharePoint 2013 online. iLink utilized the OOB SharePoint features such as Reminders, lists, list views etc. for building the core features of the application. iLink utilized the power of the SharePoint App based model to build an adaptive application that works well across desktop and tablets.
