

Non-Profit Organization

CLIENT

One of the comprehensive government consulting and technology firm that specializes in Veteran-centric solutions and business processes.

CHALLENGES

Identification of certain objects where object name is not set properly

TECHNOLOGY

- Asp .NET , Entity framework
- Windows Azure
- Selenium

PROBLEM STATEMENT

- Client has an application where data has to be entered into the system within the stipulated for verification. Entering the data manually is taking up lot of time and generating reports based on that was not done at the proper time.

HOW WE OVERCAME CHALLENGES

- Identify the Object by using linkXpath
- Adding property Attribute id by informing the respective Dev team

RESULTS/BENEFITS

- Data's were getting inserted within 15 minutes which was taking more than a day to enter manually
- Verification process ETA time has been increased by 50 %
- Business users were able to generate the report even before the date they were used to generate
- Increase in Revenue.

SOLUTION

- Analyzed and Identified Tool which supports Automation using Selenium.
- Designed and Developed Automation scripts using Selenium IDE.
